EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas Scherer (Reg. No. 45079) on May 3, 2005.

The application has been amended as follows:

In the specification, page 18, line 7, "29h" has been changed to --28h--; and on page 20, line 3, "121b" has been deleted.

In claim 1, line 27 (the first line on page 22), before "projection", "like" has been changed to --shaped--; and

in line 30, before "projection", "like" has been changed to --shaped--, and in the same line 30, after "tracking", --of the signal connection pin-- has been inserted.

In claim 2, line 20, after "bottom", --of the cabinet-- has been inserted.

In claim 3, after "2", --further comprising the cushion holes extending through a rib-shaped projection portion-- has been inserted.

In claim 4, before "projection", "like" has been changed to --shaped--.

In claim 6, "2" has been changed to --5--.

DRAWINGS

2. The following changes to the drawings have been approved by the examiner and agreed upon by applicant: 128b and 128c should be labeled in figure 9 (see attached figure 9 in red ink). In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance:

None of prior art teaches a speaker that comprises a signal connection pin having a columnar shape, a speaker unit electrically connected to the connection pin by a wire, a cabinet for holding the speaker unit, and a prolonged through hole, as constructed in claims 1 and 2, wherein the signal connection pin and the wire are mounted on an external TV cabinet, and the prolonged through hole has a first position, a second position, a third position and convex portions that are formed between the second position and third positions, as claimed in claims 1 and 2, and wherein circular holes or cushion holes extending to the bottom of the speaker cabinet are formed in the vicinity of the convex portions thereby the convex portions are deformed to increase the interval therebetween so that the small diameter portion of the signal connection pin can pass thereby and the signal connection pin can slide without wearing away the contact portions of the connection pin and the through hole (also see page 5, lines 3-7 and page 6, lines 24-27 through page 7, line 1 in the specification).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Naruki (U.S. patent 4,450,495) teaches a pair of loudspeaker units that are coupled through supporting portions (15) to a body unit (11).

Lundgren et al. (U.S. patent 5,400,408) teaches a speaker enclosure (20) that is mounted to a computer visual display.

Takashima et al. (U.S. patent 5,970,161) teaches a speaker system for a video monitor.
